

# LIFTMIND 昇智達 Smart Elevator System

LiftMind is a revolutionary elevator digital transformation solution that integrates seamlessly with existing elevator equipment via an add-on approach. It not only operates independently but also does not affect the elevator's original operation and safety. With just a short 4-hour installation, elevator digital transformation can be achieved.

- Real-time Notifications
- Remote Monitoring
- Emergency Alerts

## Why Choose LiftMind

### Enhanced Riding Efficiency

Optimizes elevator operations based on real-time demand, ensuring efficient rides.

### Instant Safety Alerts

With independent networking, LiftMind facilitates immediate communication for safety notifications both inside and outside the elevator.

### Versatile Connectivity

LiftMind integrates with various applications like robots and smart factories, offering diverse networking possibilities.

### Customized Solutions

Customized elevator management and user experiences to different usage scenarios, focused on addressing your specific needs.

Empower elevators with AI and IoT capabilities to meet diverse needs in hospitals, hotels, office buildings, residential communities, and even smart factories. Coupled with cloud-based management backend, effortlessly achieve vertical evolution in smart buildings.

## Our Services

### EFFICIENT

- Automatic docking
- Space occupancy detection
- Smart early door closure
- Floor-specific docking
- Crowded hall docking

### CREATIVE

- Data integration
- Elevator data tracking
- Robot applications
- Dual-platform management
- Third-party system integration

### SECURE

- Disablement detect
- Multi-platform remote alerts
- Multi-platform video calls
- Earthquake dock alert
- Integrated alarms
- Smart cabin video

### FRIENDLY

- Multimedia board
- Accessible voice call
- Custom voice commands

# LOBBY SENSE

## INTEGRATED LOBBY X SMART OPERATIONS

Utilizing image recognition technology to assess crowd levels in lobbies, the system prioritizes or dispatches multiple elevators, effectively managing heavy foot traffic in landing halls.

### INTEGRATE PASSENGER BOARDING INFO

Lobby Sense provides integrated lobby boarding information, allowing managers and users to easily understand the elevator's operational status. Through Lobby Sense, you can instantly view elevator status, estimated arrival times for each floor, and passenger counts. This enables each elevator to allocate resources more effectively, enhancing operational efficiency and reducing waiting times for users.

### IMPLEMENTING DIGITAL MANAGEMENT

Establishing a comprehensive digital management system, data can be used to analyze and predict the operational status and performance of elevators. Managers can identify potential issues early and take appropriate measures. It also provides a basis and reference for management work, helping better understand the operational status of elevators.

### DATA-DRIVEN DECISION-MAKING

Based on collected data and information, managers can make more scientific and rational decisions, such as resource allocation, equipment upgrades, and service optimization, to enhance the overall performance and efficiency of the elevator system.
