High-performance Parameter Extraction

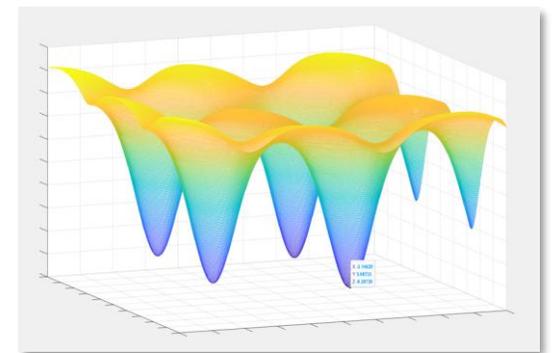

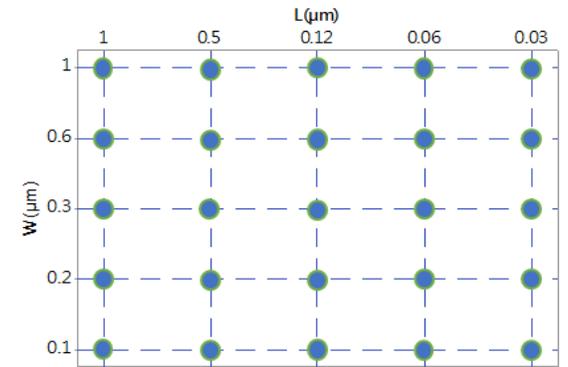

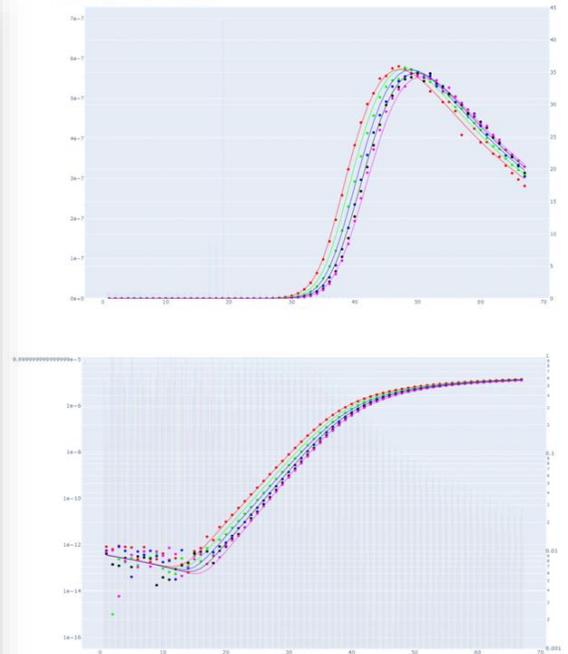

To transform an IC design schematic diagram to manufacturing processes, MOSFET SPICE models for circuit simulation must be developed to extract the key parameters. Goedge.ai created Shoku-AI™ (Intelligent Adjuster) based to extend functionalities of SPICE (also applies to other simulation tools). With it, the parameter extraction that originally required semi-manual adjustment by professional semiconductor engineers was shortened to 8 hours (original need 7 days).

what is cube root of 81? Multiply with 13.27, and subtract 5.

Calculator ^

```
json
{
  "input": "(81**(1/3))*13.27-5"
}
```

Answer: 52.4159553937914

Reasoning Tool ^

```
json
{
  "input": "round(52.4159553937914, 2)"
}
```

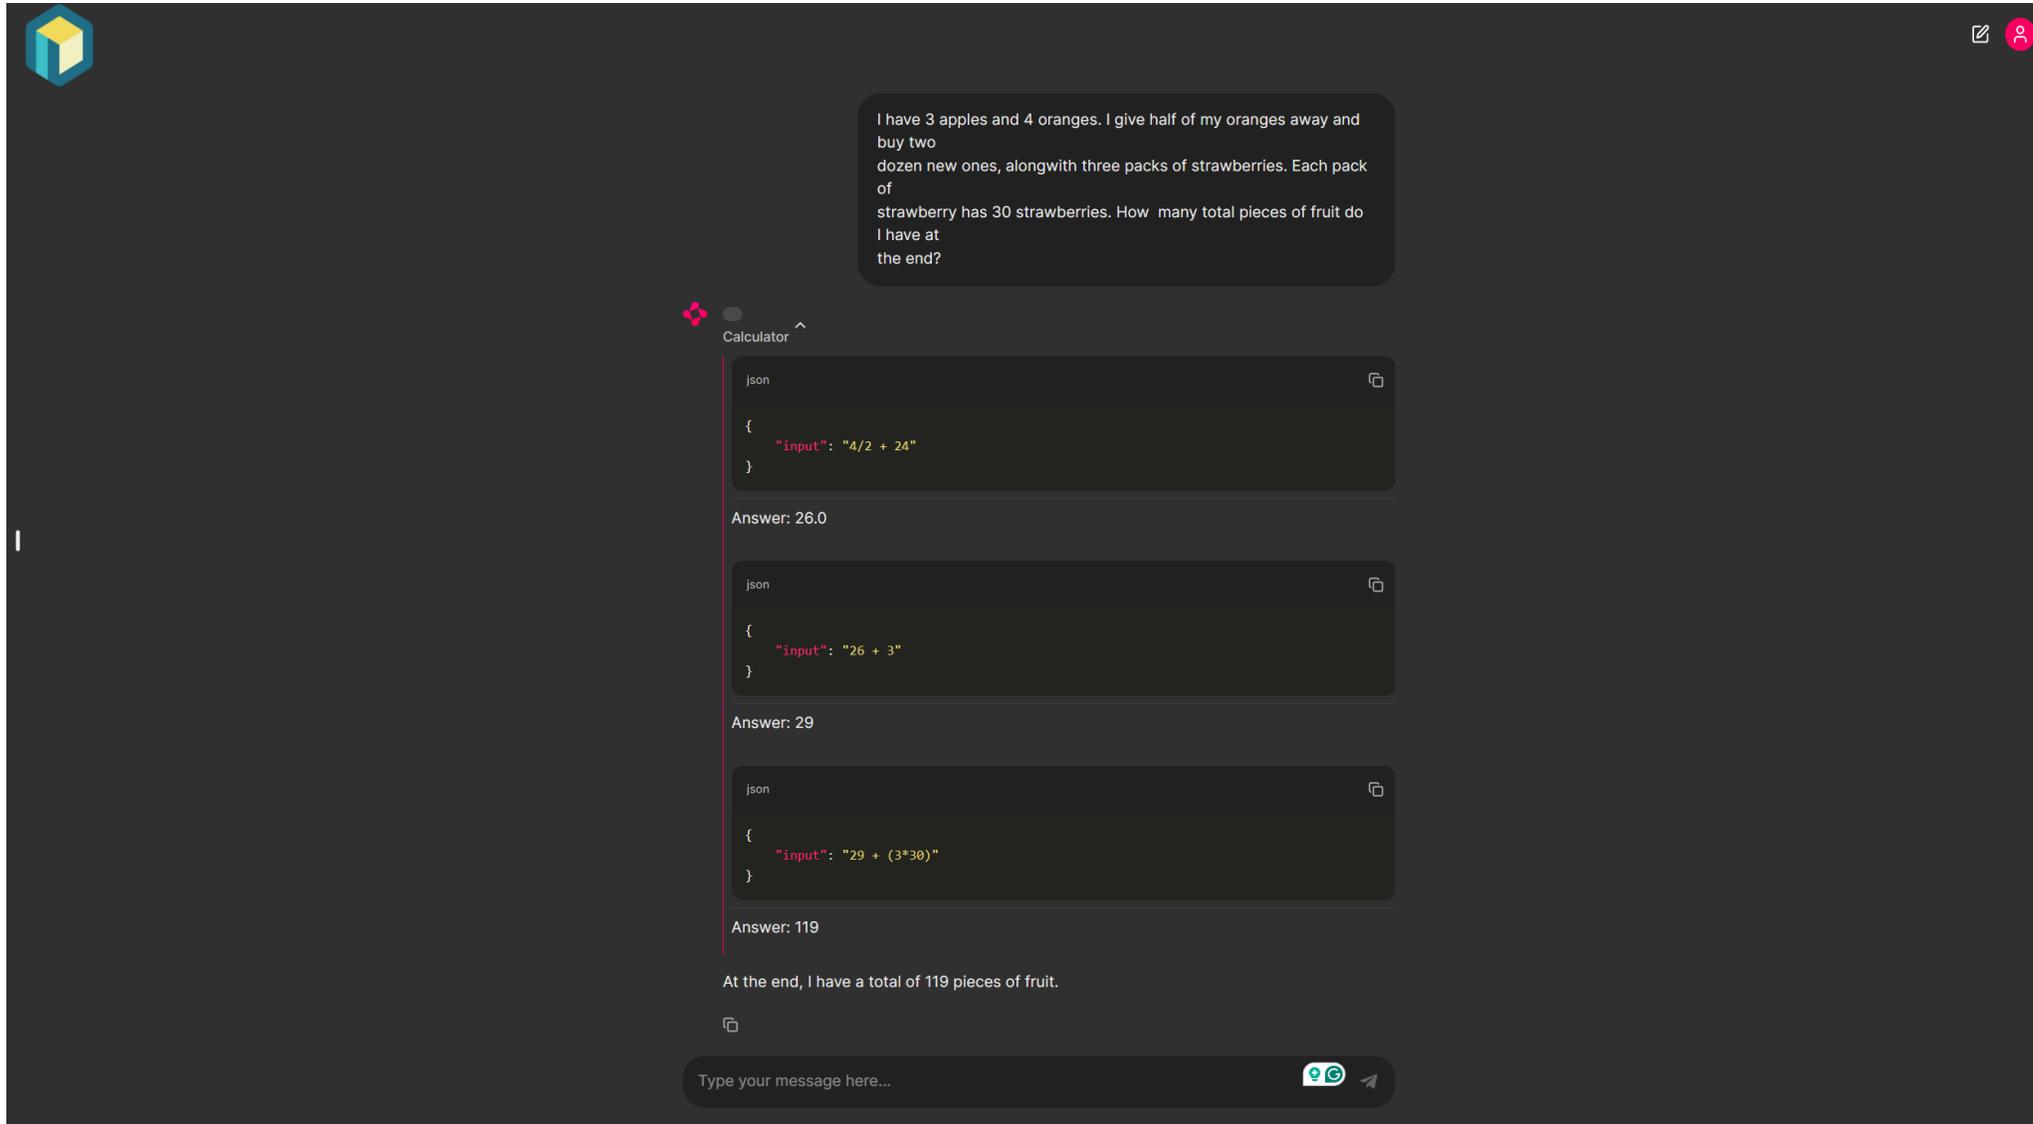

:

- The first step is to identify the question being asked, which is to round the number 52.4159553937914 to 2 decimal places.
- The second step is to look at the digit in the third decimal place, which is 5.
- Since 5 is greater than or equal to 5, we round up the second decimal place by adding 1 to it.
- This gives us the number 52.42 as the final answer.

52.42

I have 3 apples and 4 oranges. I give half of my oranges away and buy two dozen new ones, alongwith three packs of strawberries. Each pack of strawberry has 30 strawberries. How many total pieces of fruit do I have at the end?

Calculator ^

```
json { "input": "4/2 + 24" }
```

Answer: 26.0

```
json { "input": "26 + 3" }
```

Answer: 29

```
json { "input": "29 + (3*30)" }
