

Comprehensive Solution for Carbon Accounting and Energy Management

ISO 14064-1 Quantification and Reporting of GHG Emissions Inventory

- Easy to design report templates for GHG report
- Simple steps to compile greenhouse gas inventory

- Upload greenhouse gas inventory data
- Generate greenhouse gas dashboard and report

CBAM: EU's Carbon Border Adjustment Mechanism

- Select emission source declaration items
- Configure activity data allocation parameters

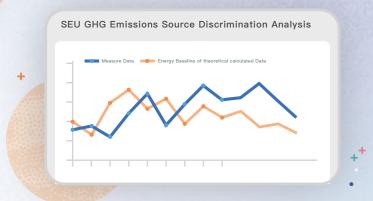

SEU GHG Emissions Source Discrimination Analysis

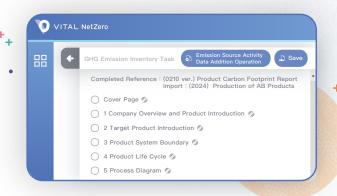

- Identify significant energy use (SEU) items
- Establish baseline and energy performance management

ISO 50001 Energy Management

- Upload energy use data
- Dashboard of energy consumption and carbon emissions

ISO 14067 Carbon Footprint of Products

- Insights on product carbon emission hotspots
- Create charts for product carbon footprint report

- Identify product emission sources and collect activity data
- Generate greenhouse gas dashboard and deport
