

◀ About Platform ▶

There are numerous smart medical solutions or products, and the demand for an integrated inquiry platform is urgent, the Joint Commission of Taiwan builds the “Health Smart Taiwan Platform” to collect high-quality smart medical products and solutions in Taiwan to provide a platform for domestic and foreign medical institutions to find their need and also let companies can promote their products and sale to foreign countries.

◀ Platform Functions ▶

Product and solution search

Promotion of successful cases

News and knowledge

Matching of products and demands

◀ Platform Features ▶

- ◆ First smart medical resource integration platform.
- ◆ Integrate high-quality smart solutions in Taiwan.
- ◆ Collect medical institutions to constitute multi-intelligence medical application field network demo sites.
- ◆ Match medical and technology industries and strengthen innovation R&D.

◀ About Content ▶

Collect Taiwan’s high-quality smart medical products and solutions, demonstration sites, etc. The platform classification is as follows:

Classification of Smart Medical Products

Hospital management system

Medical service system

Innovation technology applications

Smart care services

Peripheral software and hardware equipment

Other classifications

If you are interested in Taiwan’s smart medical solutions and are willing to visit hospitals in Taiwan to engage in exchanges and cooperation, please contact us.

Before Hospitalization

During Hospitalization

After Hospitalization

Wearable device

Physiological monitoring, positioning, medication reminder

Smart wards

Bedside information system, digital bedside card, smart infusion pump, smart mattress, anti-fall device

Nursing station

E-white board, nursing shift scheduling system, mobile nursing car

Health Management Center

Health report management, smart checkup scheduling

Smart Registration and Cashier

Self-service payment machine, health information measurement station, Smart Pay

Emergency care

Care information link
ER instant information system
Mass casualty management system

Smart surgery

Surgical scheduling, robot arm, smart monitoring

Smart pharmacy

Automatic medicine cabinet, prescription review, drug tracking, smart medicine packing machine

Smart checkup

Automatic pipe preparation machine, high-speed specimen transmission, test automation, scheduling management

Smart dialysis

Data link, case management, smart monitoring

Big data applications

Hospital information system integration, data visualization, AI-assisted diagnosis, precision medicine

Teaching research

VR virtual teaching

Smart clinics

Computer-aided diagnosis, self-service sign-up

Smart administration

Performance management indicators, interactive data report, environmental information management, risk control

Smart Navigation

Reception robot, route guide, health education

Inventory logistics

Delivery robot, warehouse management system, automatic inspection

Cloud remote care

Physiological monitoring, remote consultation

Smart long-term care

IoT applications, smart dispatch, medication reminder
