

PMIS Project Management

In Jobdone, each company can create its own projects and integrate internal and cross-organizational engineering collaboration and communication through various module functions, making project management centralized, transparent, and controllable.

Work Order

Work orders can be sent across organizations to all accounts within Jobdone, regardless of company affiliation, centrally managing work assignments and their execution status.

Improvement Form

Compiles internal and external improvement requests for engineering projects, supports cross-organizational collaboration, allows for one-stop tracking of improvement progress and responsibility attribution, and prevents recurring problems.

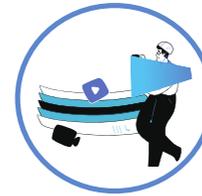

Material Inspection and Testing Control Summary Table

Automatically generates material inspection and testing applications and record forms, making the material inspection process more transparent and efficient, and improving quality control standards.

Self-Checklist

Meets the Public Construction Commission's required checklist format, requires no download, and can be filled out directly on-site via the webpage or mobile app, automatically generating reports and significantly saving post-construction processing time.

Video Log

Records projects, personnel, GPS data, and time through engineering cameras, accurately preserving the on-site construction status as a construction history and evidence for future verification.

Daily Construction Report

Meets the latest Public Construction Commission construction log format, easily recording project information, construction items, materials, trades, and equipment, and automatically calculating scheduled and actual progress.

Document Center

Centrally upload, store, and categorize construction-related documents, including design drawings, contract documents, and important data, all managed and traceable through a single interface.

Clarification Form

When communication is insufficient or problems are discovered during on-site construction or inspection, clarification or inquiries can be submitted immediately, and relevant departments will provide unified responses to avoid information discrepancies.

Acceptance Form

Provides complete acceptance management functions required for new construction projects and handover processes, including appointment scheduling, initial inspection, defect rectification, re-inspection, and handover.
