

佐翼科技  
DROXO®

## Excellent R&D capability Rich cooperation experience

Origins from NCKU Graduate School of Aeronautics and Astronautics and has rich experience in R&D and cooperation projects with MOST, STSP, etc., bringing new perspectives and diverse development of agriculture, inspection, drone light show, etc.

Droxo is the direct agent of foreign drone company and also provides self-made UAVs, unlike the common agricultural drone retailers on the market which import drones from other countries; thus, the patented technology is not monopolized by upstream manufacturers.

“ Most domestic manufacturers focus on agriculture and topographic mapping which is relatively monotonic. In contrast, UAS of Droxo has a wide range of applications and intriguingly diversified development.

# Agricultural Dilemma in Taiwan

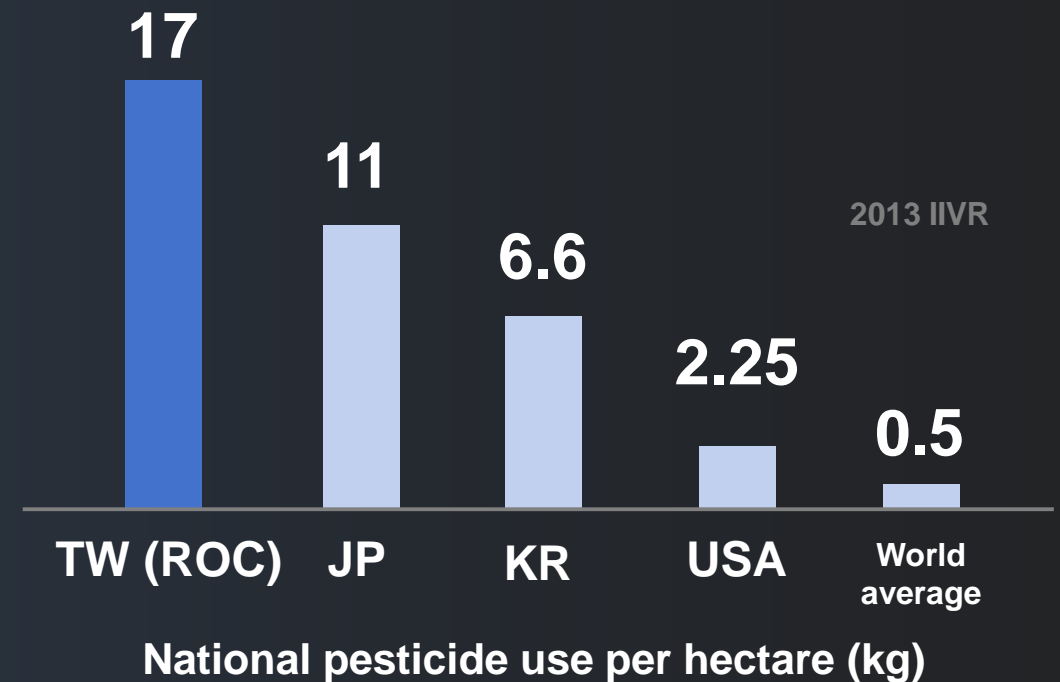

## Manpower Shortage

Annual manpower shortage of **6,000**  
people in Yunlin county 2018 UDN

## Physical Harm

- Non-deliberate pesticide poisoning in 2015:  
**392** cases
- Prolonged exposure to low doses of pesticides  
can also cause **Chronic Poisoning**

## Pesticide Overuse

An average of **4kg** of pesticide use per person

## Traditional

60 min / 0.1 ha

1 L (pesticide) / 200 L (water)

## UAV

2 min / 0.1 ha

0.6 L (pesticide) / 1 L (water)

# DX-5 | DX-5<sup>+</sup>

## Comprehensive & Cost-effective

Equipped with 5L liquid tank, DX5 series optimum smart agridrones, which best meet the needs of Taiwan's small farms are easy to operate and maintain.

Agricultural Drone

## DX5

Professional  
Agricultural  
Drone

As a high-performance agricultural drone developed for farmers engaged in long-term farming, DX5 is easy to be carried around and operate. It is also IP65 waterproof, high-strength, lightweight and easy to maintain. In addition, the power system is developed by our professional R&D team after a large number of field spray tests, high altitude drop tests (HADT) and destructive tests, referring to the advantages and disadvantages of many agricultural drones on the market. Thus, its performance is optimized to meet the actual farming needs and precise pesticide application.

Tank volume

5L

Cruise duration

15 Minutes  
10000mAh battery  
No-load flight

Spraying efficiency

6 Minutes  
Spray 0.3~0.5 ha

Operating speed

Increases  
30x

Pesticide use

Reduces  
50%

Is agridrone effective?

The principle of drone spraying is atomizing pesticides to ensure long lasting effect and its even coverage on plants.

Special spray nozzles can atomize pesticides

Can dorsal sides of leaves be covered?

During the flight, DX5 creates a powerful downward airflow while simultaneously rolling up pesticides and depositing them behind the fluttered leaves.

Are most pesticide applicable?

As long as the pesticide is uniformly soluble in water

Route Planning

Directly delimit field areas and autogenerate spray routes via our mobile app. Obstacles can be marked beforehand and be auto-bypassed during flight.

Altitude Mode

The flight will be at a fixed stable height regardless of terrain or external forces according to the altitude of takeoff point

AB Mode

After setting the starting and end points, DX5 will automatically spray according to the straight line between the two.

Smart Memory

Return to the memorized coordinate of the last task with only one click to continue, avoiding repeated spraying.

RTL Mode

Press Home button directly and DX5 will return to the launch position, protecting your crops and itself.

DX5 Agricultural drone specifications

Unfolded size: 1090<sup>①</sup> x 485<sup>②</sup> mm

Folded size: 577<sup>①</sup> x 485<sup>②</sup> mm

Weight: 7 KG

Windproof: 6<sup>③</sup> Maximum Beaufort scale

Tank volume: 5 L

Endurance: 15 min

Sprayed area: 0.4<sup>④</sup> ha / task

Operating time: 6 min

Symmetrical wheelbase: 1.09 m

Flight speed: 2~8 m/s

Spray width: 2~3 m

Waterproof: IP65

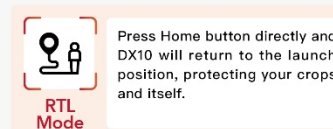

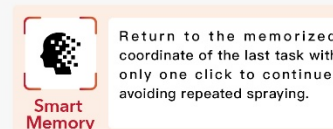

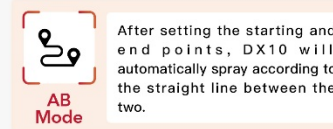

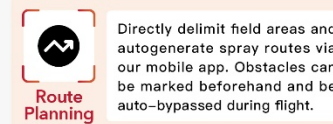

## DX10

### Professional Agricultural Drone

As a high-performance agricultural drone developed for farmers engaged in long-term farming, DX10 is easy to be carried around and operate. It is also IP65 waterproof, high-strength, lightweight and easy to maintain. In addition, the power system is developed by our professional R&D team after a large number of field spray tests, high altitude drop tests (HADT) and destructive tests, referring to the advantages and disadvantages of many agricultural drones on the market. Thus, its performance is optimized to meet the actual farming needs and precise pesticide application.

### Upgraded

### DX10 Agricultural drone specifications

Unfolded size: 1300 $\phi$ x 515 $\phi$ mm	
Folded size: 640 $\phi$ x 515 $\phi$ mm	
Weight: 11 L	Windproof: 6 <small>Maximum Gust force scale</small>
Tank volume: 10 L	Endurance: 20 min
Sprayed area: 0.6 ha/ tank	Operating time: 7 min
Symmetrical wheelbase: 1.3 m	Flight speed: 2~10 m/s
Spray width: 2~3 m	Waterproof: IP55

# Education and Training

## A Operation Tutorial

Free tutorial for customers and agents of operation, APP and emergency responses.

Difficulty : ★★☆☆☆

## B Pilot License Course

Corresponding license courses for spraying agents and customers in response to the government's latest drone regulations

Difficulty : ★★★★★

## C Agridrone Course

Training for agricultural spraying includes both drone knowledge and practical info about crops and pesticide use

Difficulty : ★★★★★

## D Special Demands

Courses of special flying skills in response to specific demands from customers

Difficulty : ★★★★★

# Cooperation with TND AIS

## Slope Farming and Pest Control of Fruit Plants

Powerful downward airflows rolls up pesticides and depositing them behind the fluttered leaves, directly annihilating the larvae and adults of litchi stink bugs.

# Face-to-face

## Collaboration with Farmers' Association for Field Observation

Through face-to-face idea exchanges, we are able to optimize our drones and promotion strategies.
