The key to victory in new-generation company competitiveness All-In-One working communication platform

team+ No.1 On-Premises Enterprise Instant Messenger

Communication determines the ability to execute and the competitiveness of a company! As mobile smart devices and BYOD have become a trend, company management will face a competitive market. Therefore, it is necessary to solve the problem of "internal communication"! team+ is the first multi-function communication cooperation platform designed for the daily working situations of companies in Taiwan. It can achieve the best information security and provide flexible professional customized service. team+ can perfectly optimize the team communication efficiency of all companies!

Private cloud environment provides most reliable information security

100% On-Premises

All business communication information and files of the company are completely stored in servers managed by the company, so confidential data will not be leaked.

Full-scale transmission encryption

Strict content encryption and an anti-disassembly mechanism allow each conversation to safely reach its destination without any errors.

File Protection

To secure your sensitive info, all files are kept off the app—not allowed to be saved to any personal devices.

Message Encryption

As all messages are to be encrypted in TEAM+ database, you no longer have to worry about information leakage!

APP security password

Each staff member of the company can set his/her personal password to control the on/off switch of all APPs on his/her own mobile device, which further provides a protection mechanism to ensure the company high information security.

Multiple management mechanisms provide full-scale risk protection

Company contact list management

This function can only be used by staff members of the company, and will be updated immediately after taking on any new recruits or when any staff member resigns.

Remote APP content deletion

This function can remotely and directly delete the APP data of each staff member of the company if the staff member resigns or loses his/her mobile device.

Backstage management function

This function sets the account data, level permission, account activation/deactivation, remote APP data deletion, etc of each worker of the company.

Comprehensive communication greatly advances team energy

IM instant chat

team+ supports various data transmissions, as well as sound recordings, files, positioning and contact lists that can be shared swiftly. The read/unread list function can control the message read status of a group with many people.

Company social group interaction

team+ can freely create team interaction groups according to each department, product and topic. The Facebook-type posts and the response interface can enhance consensus, facilitate the accumulation of knowledge, and allow the user to search discussion contents at any time, which can significantly increase work efficiency.

Multiple work management teams achieve high-efficiency team cooperation

Task allocation management

The bidirectional interactive working discussion, schedule report and reminder functions allow work management to be accomplished efficiently.

Flexibly integrate services to provide excellent customized products

Company system API integration

team+ can interface with the currently available systems, and can automatically and immediately push important notifications to all relevant workers or groups in order to increase work efficiency and better inter-department communication efficiency.

Applicable for all telecommunication services

It is not necessary to be bound to a telecom provider and purchase additional certificates.

Customized function development

We can customize dedicated functions for all companies according to the requirements of their usage situations.

VOIP & Video conference

team+ provides video conferencing and VOIP, so all staff members can easily engage in face-to-face communication.

Satisfy your needs of working inside or outside the office, and support mobile device(Android/iOS) and desktop(Windows/Mac/Web).

Message distribution planning

Users can set the message sending time or the LBS message sending area. It can make communication more flexible and effective.

Company announcements

The latest information from all departments of the company can be swiftly sent to all staff members using unidirectional communication, and can be classified and stored according to the announcement topic.

External Meber Management

TEAM+ Key Message corporate partners contacts provides you and your corporate partners with a safer and efficient communication environment!
