Device management

- Monitor project site changes via smartphone App and Dashboard on PC. It replaces manpower inspection which may cause missing.
- App provides total solutions, including LTE/ LTE-M time-lapse, which can integrate with RS-485 sensors, ex, gas sensors, weather sensors, liquid level sensors, solar panels power supply battery, and low-power wide-area network connection as a cloud service platform.
- Installation without utility powerline and physical network cable. Video stream and sensor data are transmitted synchronously, which be presented clearly on dashboard.
- Cloud management: Live view, data collection, analysis, download, sharing, detection, and alarm.
- Get new functions anytime via cloud update.
