

SYSCOM NETCenter IT Infrastructure Management Center

Challenge

With the ever increasing pace of technology development, companies are facing unprecedented challenges, be it FinTech changing financial services or Industry 4.0 bringing manufacturing changes like we've never seen before or the Internet of Things and its potential to reach deep into every corner of the economy. These drivers and many others demand a super flexible enterprise IT architecture. As corporate IT architectures continue to move toward multi-vendor solutions encompassing public cloud, private cloud, traditional networks, BYOD, telecom, security, and the Internet of Things, enterprise IT managers are struggling like never before to efficiently manage it all.

SYSCOM, with over 40 years of experience in systems integration, more than 30 years of networking know-how, and over 100 customers, has opened the next chapter in network management with our all new SYSCOM NETCenter IT Infrastructure Management Center.

NETCenter and its data reporting system represents today's most comprehensive network management tool

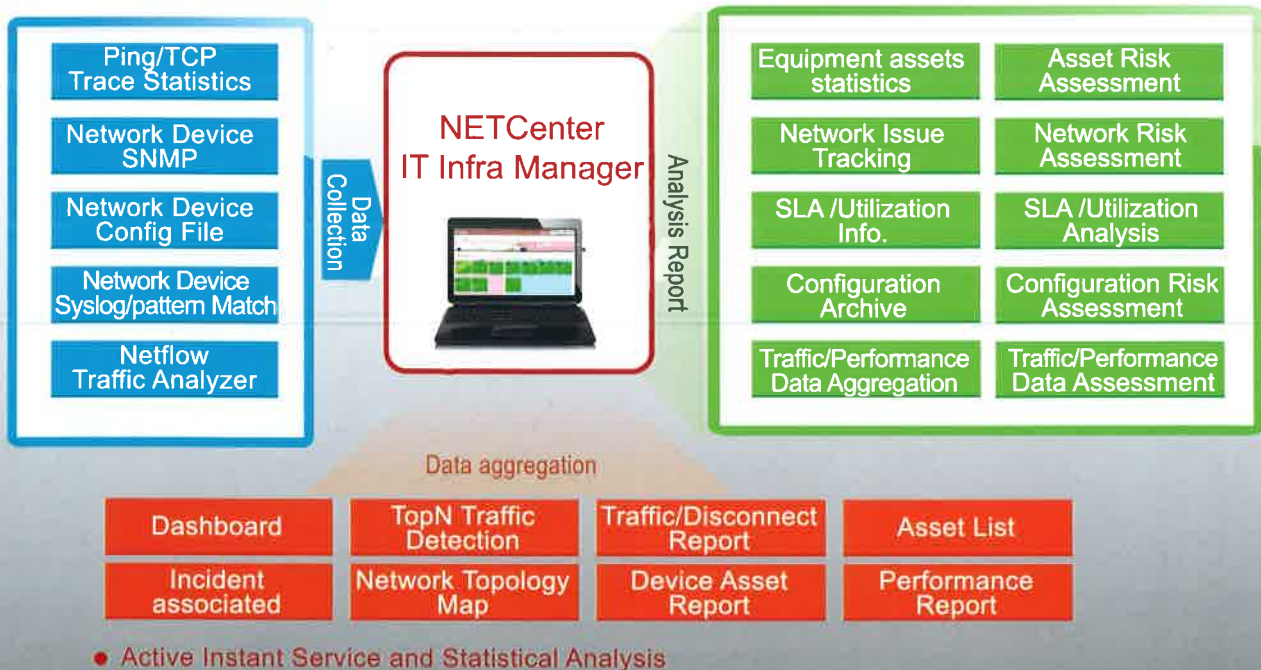

and allow IT managers to stay on top of and a step ahead of their multi-platform, multi-vendor, and always changing network infrastructure. At the end of the day, it's the speed of business that defines Return on Investment (ROI) and Total Cost of Ownership (TCO). Performance defines your competitiveness. Let NETCenter propel you to even faster and even more efficient levels of infrastructure management. Welcome to the new SYSCOM NETCenter!

Introduction

SYSCOM NETCenter IT Infrastructure Management Center Integration Platform

NETCenter provides real-time infrastructure monitoring via its powerful and flexible dashboard where device statuses keep you in control. From monitoring a particular application to showing a custom group of devices associated with a specific service, location, or project, you define the multi-level dashboards according to your needs. In combination with beautifully designed reports and graphics, IT managers easily and quickly grasp the current situation helping maintain exceptional QoS.

NETCenter TCS Service Content

Overview

NETCenter's six function modules deliver everything you need in an easy to use package: alarm management, backup management, event management, report management, dashboard monitoring and advanced flow (NetFlow) analysis management. What's more, NETCenter's primary features are customizable to meet your needs — not only now, but in the future.

Benefits

SYSCOM NETCenter IT Infrastructure Management Center is always working to reduce your TCO and enhance your ROI with features and benefits like these.

Real-Time Monitoring instantly shows unacceptable performance or other problems on custom dashboards. At a glance, immediately grasp the problem and quickly move to problem resolution.

Integrated Management supports multi-platform and multi-vendor network and security equipment combined with TCP/IP L1~L4 detection technology all from a single management tool.

Simplified Management uses the world's most popular tool, Information Technology Infrastructure Library (ITIL) to achieve unparalleled results for backup management, performance management, incident management, problem management, change management, service continuity management, and automated version control management.

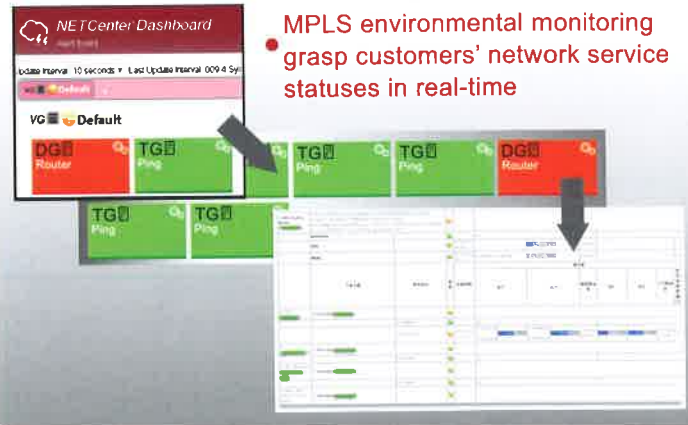

Quantitative Management uses data reports and event management to automatically report problems including discovery time, resolution time, and duration. Frequent problems are consolidated to a single more efficient report.

Easy access to IT infrastructure information for monitoring and management via Cloud Monitoring with the multi-level dashboard is available from mobile devices, pads, desktops, and notebooks. Using quantitative management data, NETCenter's big data analysis quickly gives access to a trove of useful information often leading to reduced spending on unnecessary equipment, reducing TCO, and increasing ROI.
